Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 8473 was prepared by Technical Committee ISO/TC 97, *Information processing systems*.

Users should note that all International Standards undergo revision from time to time and that any reference made herein to any other International Standard implies its latest edition, unless otherwise stated.

Contents

	Page
0 Introduction	1
1 Scope and field of application	1
2 References	2
Section one : General	3
3 Definitions	3
4 Abbreviations	4
5 Overview of the protocol	4
Section two : Specification of the protocol	7
6 Protocol functions	7
7 Structure and Encoding of PDUs	14
8 Provision of the Underlying Service	23
9 Conformance	29
Annex A	
Formal Description	31
Annex B	
Supporting Technical Material	46
Annex C	
Algorithms for PDU Header Error Detection function	50
